

# Break-Out Group Guidelines

- Assign note-taker and speaker for report-back
- Give everyone a chance to speak
- Please discuss each question

# Break-Out Questions

- Which aspects of climate change and its impacts do you anticipate to have the largest affect on you or your organization?
- What are the potential costs to you (\$ and other)?
- What are the potential benefits to you?
- Is there anything you would specifically like to see addressed in the report?

Which aspects of climate change and its impacts do you anticipate to have the largest affect on you or your organization?

# What are the potential costs to you (\$ and other)?

# What are the potential benefits to you?

Is there anything you would specifically like to see addressed in the report?

# Please fill out the stakeholder survey!

This survey is intended to jump-start thinking and brainstorming in preparation for the Stakeholder Workshop for Assessment of Climate Change Impacts on Forested Ecosystems of Alaska, November 5th, 2009 via video conference.

The USFS Pacific Northwest Research Station and the Scenarios Network for Alaska Planning, in conjunction with the Alaska Center for Climate Assessment and Policy are spearheading a synthesis assessment of climate change impacts on all forested ecosystems in Alaska. The workshop on Nov. 5th is an opportunity to engage with the core research team to let us know what issues are most important to you and how we can address these issues so that the report is relevant and useful in your work.

Please take a moment to complete this survey in order to make the workshop as productive and possible. All are welcome to fill out the survey, even if you cannot participate in the workshop.

Your participation in this survey is completely voluntary. You may choose not to answer any or all of these questions. We do not anticipate any risks to you and we cannot guarantee that you will benefit from participating in this survey. However, the answers that you provide will help us understand your information needs related to climate variability and change in Alaska.

Thank you for your interest in climate change impacts on forested ecosystems in Alaska.
